Appendix 2 – Research information sheets for survey participants. RESEARCH INFORMATION SHEET

Name of Principal Investigator: Leszek Rutkowski

Title of Research: "The application of a canting-keel concept in racing windsurfing fins. Does it lead to superior performance?"

Aim of research:

To gather a set of data providing evidence to whether the new fin application leads to superior performance.

Procedure:

The planned experiment aims at gathering 10 to 15 opinions of international-level windsurfers on a provided new-concept racing fin. The chosen competitors will be given 2 fins – first of a standard design, and a copy of the same parameters with a new fin-board mounting system introduced. The subjects will be asked to compare the provided samples during their training session (safety measures provided by clubs and coaches). They will be then asked to fill a questionnaire asking about their general opinions on the performance and control of the new-concept fin as well as precise parameters such as upwind or downwind speeds and angles. During testing the subjects will be given a GPS device providing additional quantitative data to the experiment.

Risks:

The only risks come from the activity of windsurfing itself. Neither the designed experiment nor the equipment used bring in any new hazards. Overall the risk was classified as 'low'.

Right to withdraw:

Every participant of the project has the right to withdraw at any chosen time. He/she does not have to justify his/her decision. The participant may also ask for all his personal data to be destroyed.

If you are dissatisfied with the way the research is conducted, please contact the principal investigator in the first instance: +447895459095 or +4860040765. If you feel the problem has not been resolved please contact the secretary to the Faculty of Science Human Ethics Committee: Ms Christine Brown +441752232762.

Appendix 3 – Research participants consent forms CONSENT TO PARICIPATE IN RESEARCH PROJECT

Name of Principal Investigator: Leszek Rutkowski

Title of Research: "The application of a canting-keel concept in racing windsurfing fins. Does it lead to superior performance?"

Purpose of work:

This project is an investigation into the possibility of applying a modified technology of the fin-board joint in Formula Windsurfing class equipment. The aim of the project is to gather a set of data providing evidence to whether the new application leads to superior performance. The planned experiment aims at asking international-level windsurfing competitors to compare 2 provided fins, one of which has the new joint system introduced. The subjects' opinions and feelings will be compared with numeric data gathered using GPS devices.

The objectives of this research have been explained to me.

I understand that I am free to withdraw from the research at any stage, and ask for my data to be destroyed if I wish.

I understand that my anonymity is guaranteed.

I understand that the Principal Investigator of this work will have attempted, as far as possible, to avoid any risks, and that safety and health risks will have been separately assessed by appropriate authorities.

I declare that my answers to the questionnaire provided after the experiment will be honest, based on my own judgments and that I will not try to influence the investigation's results in any way.

I declare that I will not discuss any technical details of the equipment tested with anyone who is not involved in the project.

I agree to take part in the experiment taking full responsibility for my actions. I state that I have valid insurance covering windsurfing-related situations and that I should not lay any claims on the project's leader in case of any accident or equipment damage.

Under these circumstances, I agree to participate in the research.

Appendix 5 – Effective upwind / downwind performance calculation.

$$h=2.a.sin\left(\frac{\alpha}{2}\right)$$

Appendix 6 – Measurement error calculation equations

equation 1:

if
$$C = k \cdot A$$

then
$$\Delta C = k \cdot \Delta A$$

equation 2:

if
$$C = A \cdot B$$

or
$$C = \frac{A}{B}$$

then
$$\Delta C = C \cdot \sqrt{\left(\frac{\Delta A}{A}\right)^2 + \left(\frac{\Delta B}{B}\right)^2}$$
